Alcorcón (Madrid), Spain

## Profile

Final-year Telematics Engineering student seeking a curricular internship in telecommunications, networking, systems, cybersecurity or software engineering. Hands-on academic experience in Linux environments, network configuration, Python and C programming, VoIP systems, cloud deployment and technical problem-solving. International profile developed through Erasmus studies and work experience in Germany and the United Kingdom.

## Technical Skills

### Networking & Telecommunications

- TCP/IP, IPv4/IPv6, subnetting, static routing
- OSPF, RIPng, VoIP fundamentals, basic QoS concepts
- Asterisk, PJSIP/IAX2, Wireshark, FRRouting

### Programming & Systems

- Python, C, MATLAB, Bash
- Linux, socket programming, concurrent programming
- SQL/MariaDB, REST APIs

### Tools & Platforms

- AWS EC2, API Gateway, Lambda
- Git, GitHub, Overleaf/LaTeX, COMNET III

## Selected Projects

### Vision Transformer for Shadow Angle Estimation in Outdoor Images

- Developed a computer vision pipeline to estimate shadow orientation angles from outdoor images using a pre-trained Vision Transformer (ViT) in PyTorch.
- Designed custom data loading and preprocessing from Excel-labelled datasets, including training, validation and test splits.
- Implemented regression models for direct angle prediction and sine-cosine representations to improve robustness.
- Applied transfer learning strategies, including feature extraction and fine-tuning, together with checkpointing and early stopping to reduce overfitting.
- Visualised attention maps to interpret model behaviour and improve prediction performance.

### VoIP and PBX Configuration with Asterisk

- Configured extensions, IVR menus, voicemail, music on hold and call queues in Linux.
- Worked with inter-PBX connectivity, database integration and text-to-speech features.

### Network Programming in Python

- Developed client-server and hybrid P2P chat applications using non-blocking sockets and `select()`.
- Implemented messaging, file transfer and connection management features.

### Routing and Network Services

- Configured static routing, OSPF with FRRouting, IPv6-over-IPv4 tunnels and RIPng in virtual machines.
- Analysed traffic and connectivity using Wireshark and Linux networking tools.

## Cloud Deployment

- Deployed services on AWS EC2 and integrated a simple serverless microservice through API Gateway and Lambda.

## Experience

### Telecommunications Engineering Intern 04/2026 – 07/2026

*BOINSCA, S.L., Madrid, Spain*

- Provided technical support in low-voltage electrical and telecommunications infrastructure projects, including ICT installations.
- Monitored, administered and followed up network and infrastructure deployments for large companies and clients.
- Managed and tracked ongoing projects, including documentation control, project status updates and task coordination.
- Performed preliminary analysis of tenders, requests for quotation and business opportunities through specialised platforms.
- Prepared technical and economic documentation for quotations, offers and technical projects.
- Supported the organisation of technical and administrative information related to construction works, clients and internal processes.

### Part-Time Researcher 03/2026 – Present

*University of Alcalá, Spain*

- Research role focused on training a transformer-based neural network for applied engineering and technical research tasks, alongside final-year studies.

### Football Referee 02/2017 – Present

*Royal Madrid Football Federation (RFFM), Madrid, Spain*

- Decision-making under pressure in dynamic environments.
- Strong communication, teamwork and conflict management skills.

### Telecommunications and IT Technician 03/2021 – 09/2021

*Apple Spezialisten, Berlin, Germany*

- Completed an Erasmus+ internship and later continued working for the company.
- Repaired and troubleshooted Macintosh hardware and software.
- Supported web server maintenance and technical IT tasks in an international environment.

## Education

### BSc in Telematics Engineering 2021 – Present

*University of Alcalá, Spain*

### BSc in Computer Science (Erasmus Exchange) 2025 – 02/2026

*Oxford Brookes University, United Kingdom*

Selected modules: Machine Learning, Artificial Intelligence, Foundations of Security, Applied Software Engineering

### Higher National Diploma in Telecommunications and IT Systems 2019 – 2021

*IES Benjamín Rúa, Spain*

## Awards

---

**EUGLOH Award – Best Student in Neural Network Training for Thoracic Disease Prediction** 06/07/2025  
*University of Szeged, Hungary*

- Award received at the University of Szeged for achieving the best performance in training a neural network to predict thoracic diseases from chest X-ray images, as part of an EUGLOH programme.

## Languages

---

**Spanish:** Native

**English:** B2

## Volunteering

---

**Spanish Language Assistant** 09/2025 – 12/2025  
*Cheney School, Oxford, United Kingdom*
